BUREAU OF HEALTH DATA ANALYSIS Wayne F. Schramm, Chief

July 1989

#### **PREFACE**

This report presents the final tabulation of statistical data relating to vital events in Missouri during 1988. Data for the year of the report was accepted through March 17, 1989, allowing information reflecting events in 1988 to be as complete as possible.

Missouri Vital Statistics 1988 is published for use in public health and related fields as an aid for studying births, deaths, fetal deaths, marriages, dissolutions, and abortions. Provisional vital statistics data are available through the publication, Missouri Monthly Vital Statistics. Unpublished detailed annual vital statistics data are available upon request.

#### TABLE OF CONTENTS

Table/Gr	aph		Page
		BIRTH AND DEATH TRENDS	
	Α	Live Birth and Death Rates per 1,000 Population: Missouri 1911-1988	. 1
1		Population, Recorded Births and Deaths with Rates per 1,000 Population and Natural Increase: Missouri 1911-1944	. 2
2		Population, Recorded and Resident Births and Deaths with Rates per 1,000 Population and Natural Increase: Missouri 1945-1988	. 2
	В	Total Fertility Rates: Missouri 1911-1988	. 4
3		Fertility Rates per 1,000 Females by Age of Mother: Missouri 1911-1988	. 5
	С	Crude and Age-Adjusted Death Rates per 1,000 Population: Missouri 1911-1988	. 6
4		Age-Specific Death Rates per 1,000 Population: Missouri 1911-1988	. 7
		BIRTHS	
5		Resident Live Births by Selected Characteristics by Race of Child: Missouri 1988	8
6		Resident Live Births by Age of Mother by Live Birth Order by Legitimacy by Race of Child: Missouri 1988	. 9
7		Teen-age Resident Live Births by Age of Mother by Live Birth Order by Legitimacy by Race of Child with Percentages: Missouri 1988	10
8		Percent Low Birth Weight and Resident Live Births by Birth Weight by Age of Mother by Race of Child: Missouri 1988	. 11
9		Resident Live Births by Legitimacy by Race with Percentages by County and Cities with 25,000 or More Population: Missouri 1988	12
10A		Resident Live Births by Selected Characteristics by Race, Regional Planning Commission: Missouri 1988	16
10B		Resident Live Births by Selected Characteristics by County: Missouri 1988	20
10C		Resident Live Births by Selected Characteristics by Cities with 25,000 or More Population: Missouri 1988	40
11		Resident Teen-age Pregnancies and Abortions by Selected Ages by County of Residence: Missouri 1988	44
		ABORTIONS	
	D	Resident Abortion Ratios per 1,000 Live Births: Missouri 1971-1988	46
12		Resident Abortions by Race, Age of Woman, Type of Procedure, and Complications by Weeks of Gestation: Missouri 1988	47
13		Resident Abortions by Age, Marital Status, and Education, by Race: Missouri 1988	48
14 <b>A</b>		Resident Abortions and Ratios per 1,000 Live Births by County of Residence: Missouri 1988	49

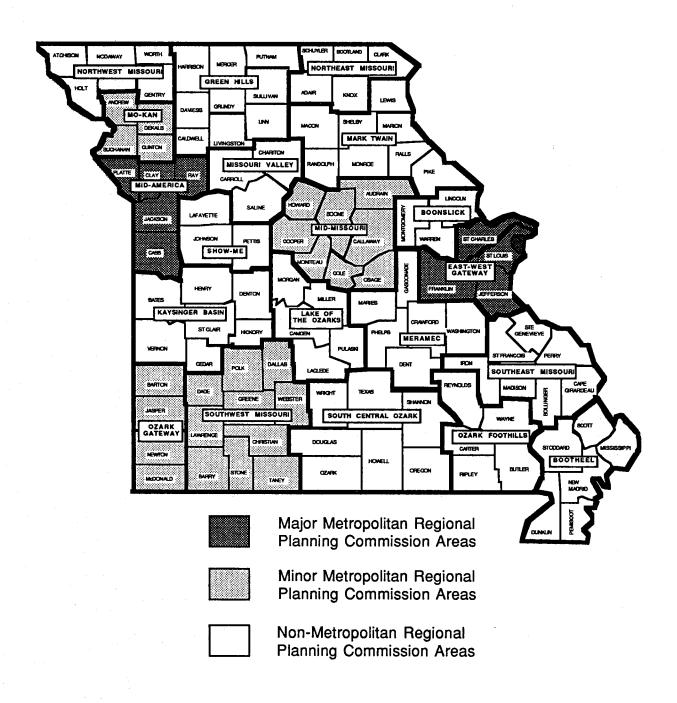

## Table of Contents (continued)

Table/G	raph		Page
14B		Resident Abortions and Ratios per 1,000 Live Births by Regional Planning Commission of Residence: Missouri 1988	50
15		Resident Abortions by Age and Marital Status of Woman: Missouri 1988	50
16		Resident Abortions by Number of Living Children and Number of Previous Abortions: Missouri 1988	50
		NATURAL INCREASE	
17		Resident and Recorded Live Births, Deaths, and Natural Increase with Rates by Counties and Cities with 25,000 or More Population: Missouri 1988	51
18		Resident and Recorded Live Births and Deaths by Cities with 2,500-24,999 Population: Missouri 1988	55
		DEATHS	
19		Twelve Leading Causes of Death by Race with Percentages and with Rates per 100,000 for all Races, Resident Data: Missouri 1988	58
20		Five Leading Causes of Death for Selected Age Groups with Percentages, Resident Data: Missouri 1988	59
21		Resident Deaths, Age Groups by Race by Sex with Age-Specific Rates per 1,000 by Sex: Missouri 1988.	60
22A		Resident Deaths, Age Groups by Selected Causes of Death: Missouri 1988	61
22B		Male Resident Deaths, Age Groups by Selected Causes of Death: Missouri 1988	63
22C		Female Resident Deaths, Age Groups by Selected Causes of Death: Missouri 1988	65
	E	Infant Death Rates per 1,000 Live Births: Missouri 1911-1944 (Recorded), 1945-1988 (Resident)	67
23A		Resident Perinatal, Infant, Fetal, Neonatal, Postneonatal and Maternal Deaths by County and Cities with 25,000 or More Population: Missouri 1988	68
23B		Resident Perinatal, Infant, Fetal, Neonatal, Postneonatal and Maternal Deaths by Regional Planning Commission with Rates per 1,000 Live Births: Missouri 1988	70
24		Resident Infant Deaths by Age, Cause, and Race with Rates per 1,000 Live Births by Cause and Race: Missouri 1988	71
25		Resident Infant Deaths and Rates per 1,000 Live Births by Age of Mother by Birth Order: Missouri 1988	72
26	. •	Resident Infant Deaths and Rates per 1,000 Live Births by Birth Weight by Race: Missouri 1988	72
27A		Resident Deaths by Selected Causes of Death; For State Total by Race with Rates per 100,000 for all Races; and for Regional Planning Commissions: Missouri 1988	73
27B		Resident Deaths by Selected Causes of Death by County: Missouri 1988	76
27C		Resident Deaths by Selected Causes of Death by Cities with 25,000 or More Population: Missouri 1988	91

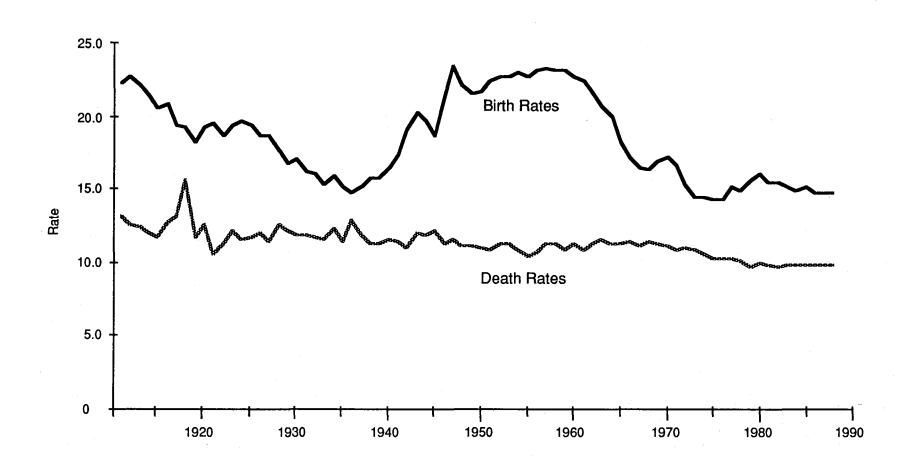

## Table of Contents (continued)

Table/G	araph		Page
28		Recorded Deaths by Type of Accident, Age, and Sex: Missouri 1988	94
29		Abridged Life Table for the Total Population and by Sex: Missouri 1988	95
		MARRIAGES	
	F	Marriage Rates per 1,000 Population: Missouri 1949-1988	. 98
30		Reported Marriages by Age of Groom; by Age of Bride: Missouri 1988 1988	99
31		Reported Marriages by Age and Previous Marital Status of Bride and Groom: Missouri 1988	. 101
32		Reported Marriages by Previous Marital Status of Bride and Groom: Missouri 1988	102
33		Reported Marriages by Race of Bride by Race of Groom: Missouri 1988	102
34A		Reported Marriages by County of Recording with Rates per 1,000 Population: Missouri 1988	. 103
34B		Reported Marriages with Rates by Regional Planning Commission of Recording: Missouri 1988	. 104
		DISSOLUTIONS	
	G	Dissolution Rates per 1,000 Population: Missouri 1949-1988	. 105
35		Reported Dissolutions of Marriage by Type of Decree: Missouri 1988	. 106
36		Reported Dissolutions and Invalidities by Number of Previous Marriages, Husband by Wife: Missouri 1988	. 106
37		Reported Dissolutions and Invalidities by Duration of Marriage: Missouri 1988	. 106
38		Reported Dissolutions and Invalidities by Number of Children Affected: Missouri 1988	. 107
39		Reported Dissolutions and Invalidities by Petitioner by Disposition of Children: Missouri 1988	. 107
40		Reported Dissolutions and Invalidities by Type of Maintenance and Settlement: Missouri 1988	. 107
41		Reported Dissolutions and Invalidities by Age of Wife by Age of Husband: Missouri 1988	. 108
42		Reported Dissolutions and Invalidities by Race, Wife by Husband: Missouri 1988	. 108
43A		Reported Dissolutions and Invalidities by County of Recording with Rates per 1,000 Population: Missouri 1988	. 109
43B		Reported Dissolutions and Invalidities with Rates by Regional Planning Commission of Recording: Missouri 1988	. 110

## **APPENDIX**

#### RELIABILITY OF THE DATA

In analyzing any data, the fact of potential error in the data must not be overlooked. There are several types of errors possible including: underregistration, errors made by the informant, and errors in compiling and processing.

Probably, the most potentially dangerous error is that of improper interpretation. Statistics are neither more true nor false than the interpretation given to them. Particular caution must be made in analyzing trend data, for there have been changes over the years in medical diagnosis, coding definitions, and registration coverage. Most of the rates computed in this report are crude rates. In comparing geographic areas, crude rates are limited because they do not take into account the differences in age, sex, race, and other population characteristics. Care should also be taken in using rates where the number of events or the population is small. Minor variations in the number of events may result in major changes in the rates. Rates based on less than 20 events are very unstable.

#### VITAL RECORDS

Vital Statistics in Missouri are compiled from six basic records which are filed with the Department of Health by State Law. These records are: (1) live birth records, (2) death records, and (3) fetal death records each beginning with 1911; (4) marriage, and (5) divorce records, beginning with 1949; and (6) abortion records beginning in 1975.

Missouri cooperates with other states in the exchange of records for live births, fetal deaths, and deaths to include in resident data events occurring to Missouri residents in other states. Missouri also has an arrangement with Kansas and Tennessee for the exchange of abortion data. Before 1984, Missouri received abortion records from Illinois, but Missouri no longer receives these records.

The data within this report represents the 1988 calendar year of events. Records have been accepted through March 17 of 1989 before cut-off, allowing 1988 events to be as complete as possible.

#### SOURCES

Except where noted, historical vital statistics data are taken from annual vital statistics reports of the Missouri Department of Health.

#### **POPULATION**

County population estimates used in this report are provisional estimates of population, July 1, 1988 developed by the Division of Budget and Planning, Office of Administration. The source of the 1911-1969 state total estimates is the Bureau of the Census' P-25 series. 1971-1979 state estimates were obtained from the Bureau of the Census publication "Preliminary Intercensal Estimates of the Population of Counties." Age-sex specific population estimates were developed by the U.S. Bureau of the Census (also in the P-25 series). City population estimates for July 1, 1988 are derived from preliminary July 1, 1986 population estimates prepared by the Bureau of the Census.

#### **RACE**

The term "race" refers to the division of population into three groups, white, black, and other. Most tables in this report simply use two divisions, white and "black/other" because of the small numbers of persons from other races in Missouri. The race group designated as "black/other" consists of such races as the Negro, American Indian, Japanese, Chinese, Filipino, Korean, Asian Indian and Malayan races.

Persons of Mexican birth or ancestry who are not definitely of Indian or other non-white race are classified as white.

Persons of mixed racial parentage are classified according to the race of the non-white parent.

## TERMS "RESIDENT" AND "RECORDED"

It is important to understand the significance of the terms "Resident" and "Recorded" when analyzing vital statistics.

"Resident" data are compiled for vital events that relate to persons residing in an area independent of where the events occurred. (A person is considered to be a resident of an area if he has resided there six months or more. An exception to this involves people dying in hospitals, nursing homes, or other institutions. In such cases, the usual place of residence before admission is reported. In the case of live births, fetal deaths, and infant deaths, the residence of the mother is considered to be the residence of the child.)

"Recorded" data are based on the number of vital events that occur in an area. These data are used to analyze events that might be affected by the place in which they occur.

Resident and recorded figures can neither be added nor subtracted from the other. Thus the number of events occurring or not occurring in the same geographic area where the people reside cannot be calculated from resident and recorded data.

#### **UNKNOWNS**

Records classified as Missouri residents with unknown county of residence are included in the state totals of this publication. In annual vital statistics reports before 1979, these records were excluded from totals. The number of 1988 records with unknown county of residence by system is as follows:

Live Births	0
Fetal Deaths	0
Deaths	1
Abortions	43

The following imputations of unknowns were made in this report:

Unknown sex is considered male.
Unknown race is considered white.
Unknown marital status is considered married.
Unknown live birth order is considered 1st.

## **RATES**

Rates are calculated by dividing the event of concern by the population at risk or a related population and multiplying by a constant. Live birth, death, natural increase, marriage, and dissolution rates are expressed in terms of 1,000 estimated midyear population. Infant, perinatal, fetal, neonatal, and postneonatal death rates are stated per 1,000 live births.

Rates per 100 live births or percentages are used in Tables 7-10C for such rates as illegitimacy or low birth weight. In Table 10, unknowns are excluded in the calculation of percents for (1) Apgar Score less than eight, (2) mother smoked during pregnancy, (3) mother under 60 inches, (4) mother under 100 lbs., (5) mother 175 lbs. or more, and (6) inadequate prenatal care.

**Total Fertility Rate** (Graph B) refers to the average number of births a woman would have if a given set of age-specific birth rates applied throughout her reproductive years.

General Fertility Rate (Table 3) refers to the total number of live births per 1,000 women aged 15-44 for a given year.

**Age-Specific Fertility Rate** (Table 3) is the number of live births born to mothers of a given age per 1,000 females of that age group for a given year.

The Abortion Ratio is a ratio of abortions per 1,000 live births for a given year.

Crude Death Rate is defined as the total number of deaths of area residents for the year divided by the midyear population of the area multiplied by some constant. The constants used in this report are 100,000 for cause specific rates and deaths for all causes in Tables 19 and 27A and 1,000 for death rates in all other tables and graphs.

Crude Death Rate = number of deaths during year x 1,000 or 100,000 midyear population

Age Specific Death Rate (Tables 4 and 21) is calculated in the same manner as the crude death rate except that both the number of deaths and the midyear population are restricted to a given age group.

Age-Specific Death Rate =
For given age group:
number of deaths during year x 1,000
midyear population

The **Age-Adjusted Death Rate** (Age-Adj Rate) is a weighted average of age-specific death rates. Comparison of areas or time periods using crude death rates can often be misleading, since these rates are affected by the age composition of the population. For example, a county may display a high crude death rate simply because it has an older population.

To control for these differences in age compositions, age-specific rates can be weighted according to a standard population. Such a calculation produces an age-adjusted rate. The age-adjusted rates shown in this report are calculated by the direct method with the following formula:

Age-Adjusted Death Rate =  $\sum$  M<sub>a</sub> x  $\underbrace{Pa}_{P}$  where Ma = age-specific rate for given age group P = total standard population

This report uses five-year age groupings with 1970 Missouri population as the standard. Each figure thus represents the rate that would have existed if the age-specific rates in question prevailed in a population whose age distribution is like that of Missouri in 1970. This serves to control for differences in age compositions and makes comparisons between areas or time periods more legitimate. It is important, however, not to compare age-adjusted death rates with other rates adjusted to different standard populations.

The Abridged Life Tables in this report (Table 29) are generated from a computer software package originally developed by the National Center for Health Statistics, and modified by the Missouri Center for Health Statistics. It uses the technique of "reference to a standard table." These tables are technically defined as "current life tables" since they are cross-sectional in nature. In other words, these tables do not represent the life expectancy of an actual cohort of all Missourians born in a particular year and followed throughout their lifetime. Rather, the current life table considers a hypothetical cohort and assumes it is subject to the age-specific mortality rates existing for a given year. This means that the current life tables contained herein assume hypothetical cohorts subject throughout their lifetimes to the age-specific mortality rates prevailing for the year of this report.

The term "abridged" indicates that the age interval used in the tables are five-year age groupings rather than single years of age.

## CAUSE OF DEATH CLASSIFICATION

Cause of death data are displayed by the underlying cause. The underlying cause of death is defined as the disease or injury which initiated the train of morbid events leading directly to death or the circumstances of the accident or violence which produced the fatal injury.

The causes of death presented here are classified in accordance with the Ninth Revision of the International Classification of Diseases (ICD-9), 1975; World Health Organization. This revision has been used to classify deaths occurring on or after January 1, 1979. Comparisons with data from earlier years must be done with caution, since these were classified under different coding schemes. Consequently, certain diseases may show changes in their trends as a result of changes in definitions. For a general measure of the extent of these changes between the eighth and ninth revisions, consult "Estimates of Selected Comparability Ratios Based on a Dual Coding of 1976 Death Certificates by the Eighth and Ninth Revisions of the International Classification of Diseases," *Monthly Vital Statistics Report*, National Center for Health Statistics, Volume 28, Number 11, Supplement (February 29, 1980).

The specific causes of death in this report are shown in groupings of 34 causes. In those tables presenting leading causes of death, the rankings are based on a further consolidation of these 34 causes. These causes are listed below with their ICD-9 codes. Those used for ranking purposes are noted with an asterisk.

Causes of Death	ICD-9 Codes
*Tuberculosis	010-018
*Syphilis	090-097
Residual of Infectious & Parasitic Diseases	001-009, 020-088, 098-139

MEDICAL CONDITIONS ON BIRTH RECORDS		
Table 5 presents selected medical conditions reported on the birth certificate. R conditions is considered to be very poor, thus, extreme caution should be used whe results in Table 5. Space is available for the reporting of two types each of macomplications and pregnancy and labor. Therefore, the total number of records with confewer than the sum of the specific types of complications. #### ADDITIONAL DEFINITIONS

Apgar Score — An international code ranging from 0 to 10 used to measure the health of an infant at one minute and five minutes after birth. Items used to derive the score are heart rate, respiratory effort, muscle tone, reflex irritability and color. A score below eight implies a moderately or severely depressed conditon. The score used in Table 10 is taken at five minutes after birth. Caution should be used in interpreting patterns of low Apgar scores by area because of a possible subjective bias in assigning scores. Different medical personnel may assign different scores to the same child.

Birth Order — Number of previous pregnancies plus one.

Fetal Death — Death taking place at 20 weeks gestation or later and before birth.

Inadequate Prenatal Care — Fewer than five prenatal visits for pregnancies less than 37 weeks, fewer than eight visits for pregnancies 37 weeks or longer or care beginning after the first four months of pregnancy. Before 1982, records with unknown prenatal care or unknown length of pregnancy were excluded. Beginning in 1982, if adequacy of prenatal care could be determined even if length of pregnancy was unknown, then these records were included.

Infant Death — Baby dying during the first year of life.

Live Birth Order — Number of previous babies born alive now living plus one.

Low Birth Weight — Less than 2500 grams or five and one-half pounds.

Maternal Death — Mother dying as a result of complications of pregnancy, childbirth and puerperium (ICD-9 codes 630-676).

Natural Increase — Resident live births minus resident deaths.

Neonatal Death — Baby dying during first 27 days of life.

Operative Delivery — Forcep or cesarean delivery (includes MCHS method of delivery codes 52-58 and 62-79).

Out-of-Wedlock Birth — Birth involving mother who was unmarried at time of conception, at time of birth, and throughout time between conception and birth.

Perinatal Death — Fetal or neonatal death.

Postneonatal Death — Death occurring after 27th day of life and before one year.

Teen-age Pregnancy — Live birth, fetal death or abortion occurring to a woman under 20 years of age.

Additional information about the Missouri birth and death data systems may be found in *User Manual for Live Birth/Fetal Death Data System* — MCHS publication No. 4.15, *User Manual for Death Data System* — MCHS publication No. 4.18, and *Birth and Death Appendix Tables*, MCHS publication No. 4.16.
